OBJECTIVE

Results- Oriented **final year** student with a strong foundation in **Data Science,Machine Learning** ,and **AI** . Demonstrated experience building complex models (Vision Transformers), and Insight-driven ML dashboards. Skilled in **Python-based automation** , **Generative AI**, and **AgenticAI** with proven ability to deliver actionable insights. Seeking an internship to apply robust analytical skills to new challenges in ML,DL , and Intelligent systems.

EDUCATION

B.Tech Artificial Intelligence and Data Science
Saranathan College of Engineering - Autonomous
• **Cumulative GPA: 7.56/10**
• **Relevant Coursework:** Machine Learning, Deep Learning, Artificial Intelligence, Fundamentals of Data Science, OOP Concepts, Data Exploration and Visualization, Computer Networks, Data Structures and Algorithms.

Tiruchirappalli, Tamil Nadu
September 2023 - Present

SKILLS

Languages : C, Python, Java ,JavaScript, SQL .

Frameworks : Django, FastAPI.

Tools & Technologies : Power BI, MySQL, Git, GitHub, TensorFlow, Scikit-learn,LangChain,LangGraph,RAG,Transformers,LLM.

Soft Skills : Adaptability, Problem-Solving, Leadership, Teamwork, Time Management.

PROJECTS

ExcelAI – Voice Activated GenAI Spreadsheet Assistant

- **Built a Full-Stack AI Assistant** using **Django** and **Gemini 2.0** for voice-driven Google Sheets automation.
- **Engineered Agentic Workflows** with **LangGraph** to execute autonomous row updates and cell highlighting.
- **Integrated Google Sheets API** for seamless, real-time cloud synchronization and bi-directional data flow.
- **Developed a CSV Import System** for instant bulk data syncing with an auto-refreshing live preview.
- **Technologies:** Python, gemini-3-flash-preview, Django,LangChain,LangGraph,GoogleSheet API,JavaScript.
- **Github:** [Link](#) .

PostgreSLM-Domain Specific AI Assistant for PostgreSQL Administration

- Developed a Full-Stack AI powered PostgreSQL Assistant by integrating a fine-tuned **Mistral-7B** Small language model(SLM) with a **Hybrid Retrieval-Augmented Generation (RAG) pipeline** for accurate ,context-aware database support.
- Fine-tuned **Mistral-7B-Instruct** using Unsloth(QLoRA/PEFT) on PostgreSQL domain-specific datasets ,significantly improving SQL generation ,query Understanding and technical response quality.
- Designed a **Hybrid Retrieval Engine** using **Langchain Ensemble Retriever** ,combining BM25 keyword search with **FAISS** semantic retrieval to minimize hallucinations and enhance factual accuracy.
- **Technologies:** Python,Mistral-7B,QLoRA,PEFT,LangChain,LangGraph,FAISS,BM25,FastAPI,React.js ,Kaagle,HuggingFace .
- **Github:** [Link](#).

Medical Image Classification using Vision Transformers

- Developed and trained an advanced deep learning model for a college mini-project focused in Medical image classification.
- Implemented a Vision Transformer (ViT) architecture to achieve high accuracy in classifying medical scans, showcasing expertise in modern deep learning and computer vision.
- **Technologies:** Django, Python, DeepLearning ,PyTorch ,Vision Transformers,Scikit-learn.

LANGUAGE PROFICIENCY

English - Full Professional Proficiency

Tamil - Native Proficiency
